

GinoNova

AI-Driven DevOps Learning Platform v2.8.0 — Created by Said Borna

WHAT IT DOES

GinoNova is an interactive learning platform for DevOps, Linux, and systems administration. It delivers 31 structured modules covering the full DevOps ecosystem — each with hands-on labs, flashcards, quizzes, and career-focused interview preparation. A persistent AI assistant provides context-aware guidance on every page, an AI quiz engine generates unique questions from module content in real time, and a tenta simulator serves 1,200+ exam questions across six verified question banks. Students progress through adaptive difficulty levels, earn certificates, track learning velocity through an analytics engine, and engage in a threaded community forum with reputation mechanics. A full admin surface provides real-time operational visibility.

HOW IT'S BUILT

The platform is a vertically integrated system — frontend, backend, database, AI layer, and admin tooling — built and operated as a single codebase. It supports multiple OAuth providers, real-time activity tracking, email verification, interactive code execution across five environments, and AI-powered content generation. The architecture is designed for production-grade performance and scale from day one.

THE VISION

The DevOps education market is dominated by platforms charging \$300–500 per year for content designed for passive consumption — video lectures, static quizzes, no real feedback loop. None of them were built for the way developers actually learn: by doing, by failing, by iterating with intelligent assistance. GinoNova exists to close that gap. The ambition is a platform that takes a complete beginner to a job-ready DevOps engineer in 6–12 months — with AI-powered personalization, hands-on execution environments, structured learning paths, and career-focused content — at a quality level that competes directly with established commercial platforms. The goal is not to be software that happens to work. The goal is to be the best DevOps learning platform available, period.

CURRENT STATE

GinoNova is in active development with a production deployment live at ginonova.com. The core platform is stable and operational: 31 modules published, AI assistant and quiz engine live, 1,200+ exam questions serving, community forum functional, admin dashboard providing full visibility. Development continues with the explicit ambition of reaching full market readiness — the distance between a working product and one that wins on first impression.
